PROJECTS

Architectural inspirations with WEO® Cladding

Exceptional architectural projects, whether villas, commercial spaces or urban buildings, have enhanced their design with Fiberdeck® WEO® cladding. This lookbook highlights how our cladding integrates naturally into all environments and blends with a variety of materials.

Combining aesthetics, durability and ease of maintenance, WEO® cladding, made from 95% recycled plastic, is weather resistant and offers a high-performance solution for environmentally conscious architects and designers.

We would like to thank all the professionals who have revealed its full potential by combining it with other materials to create unique architectural compositions. More than just a catalogue, this lookbook is a real source of inspiration for tomorrow's projects.

Nicolas Tart

Founder of Fiberdeck®

WEO®

Bio-sourced cladding with outstanding performance

WEO® cladding boards have been developed using the latest co-extrusion technologies to ensure a product that is both weather-resistant and fade-resistant for 20 years, while utilizing 95% waste materials in its manufacturing. A waterproof polyethylene layer protects the wood from moisture absorption and stabilizes the material. Expansion is also minimized. Maintenance is limited to simple cleaning.

Vilablareix

Modern Villa

Nestled in Vilablareix, Spain, this modern villa is the result of a bold vision, driven by a family seeking comfort and harmony with their surroundings.

Designed by architects Juanjo Ojeda and Miguel Gámez, this project showcases the full potential of WEO® cladding by Fiberdeck®, an aesthetic and functional choice that combines contemporary design with outstanding technical performance.

Dive into the details of this unique construction and be inspired by the perfect blend of architecture, sustainable materials, and an exceptional living environment.

Ardenya 57

Modern Villa

Located in the stunning Mas Trempat residential area in Sant Feliu de Guíxols, on the Costa Brava, this modern villa embodies Mediterranean elegance and architectural innovation. With a total surface area of 314 m² spread across three levels (basement, ground floor, and first floor) and set on a 449 m² plot, this home is a model of sustainable design and timeless aesthetics.

Just five minutes by car from the beaches of Sant Feliu de Guíxols and S'Agaró, this four-sided villa benefits from optimal exposure. The southwest-facing façade is a key feature, capturing natural light and making every space bright and welcoming.

Rubén Milena Segura, architect, together with Roger Reyner, a designer from his team, selected WEO®35 cladding to enhance the villa's façade.

«We chose it for its natural look, which blends perfectly with the other materials used in the project, and for its maintenance-free advantage, unlike natural wood.»

Slovakia

Modern Villa

In the heart of a rapidly evolving Slovak urban landscape, this modern villa perfectly embodies contemporary architecture, where elegance and performance come together. Designed with clean lines and a bold aesthetic, it stands out with its WEO® composite cladding, an aesthetic and functional choice that enhances the entire project.

This cladding brings a warm and authentic touch to the minimalist façade. Its finely structured slats interact with light, creating subtle depth effects that reinforce the villa's modern identity.

This project brilliantly showcases the ability of WEO® cladding to seamlessly integrate into contemporary architecture, offering the perfect balance between modernity, originality, and durability. A must-have reference for those seeking a stylish and timeless façade.

Balboa

Modern Villa

«This is the project of a lifetime, the culmination of 18 months of work and 20 years of labour.»

For this contemporary villa with bold lines, the architect chose WEO®35 cladding, a material that combines the aesthetics of wood with exceptional durability and ease of maintenance. Its ability to faithfully reproduce the look of natural wood, while ensuring long-term color stability, makes it an ideal choice for modern and timeless architecture.

In this project, characterized by the combination of raw concrete and large glass openings, WEO® cladding plays a key role. It adds warmth to the façade, creating a harmonious contrast with mineral materials while enhancing the minimalist elegance of the overall design. Thanks to its textured surface, it subtly interacts with light and gives character to the exterior.

Beyond its aesthetic appeal, WEO® cladding ensures weather resistance and requires no maintenance, guaranteeing optimal longevity without compromising on design. A perfect solution for those seeking an elegant, durable, and contemporary façade.

Cypress

Residential building

Located in the prestigious Malinova Valley district of Sofia, this building perfectly embodies the fusion of modernity and sophistication. Its sleek, contemporary design is enhanced by WEO® cladding, which plays a key role in the project's aesthetics.

The originality of this achievement lies in the diagonal installation of the cladding, a bold architectural approach that energizes the façade and gives it a unique character. This design choice creates a striking visual effect, accentuating the building's lines and adding a distinct graphic dimension to the overall structure.

With this project, WEO® cladding once again demonstrates its ability to adapt to the most demanding architectural visions, offering a solution that is both aesthetic, durable, and innovative.

The ROVIP Company

For this ambitious project, 3,000 m² of photovoltaic panels have been installed, making this professional building a benchmark in energy efficiency and environmental responsibility. To complement this sustainable approach, the architect and the company chose WEO® cladding to cover the façade.

With its modern design and structured texture, WEO® cladding adds a strong aesthetic dimension while ensuring excellent weather resistance and long-term color stability. Its natural appearance and ultra-matte finish blend seamlessly with the building's architecture, reinforcing its contemporary identity.

With this project, WEO® once again demonstrates its ability to combine innovation, performance, and aesthetics, offering a solution that is both sustainable, elegant, and environmentally friendly for professional infrastructures.

Villa P.

Modern Villa

This exceptional villa, fully renovated, offers one of the most breathtaking views of the French Riviera. Every detail has been carefully reimagined to blend architectural refinement with seamless landscape integration, creating a warm and contemporary atmosphere.

To accentuate its elegant lines and ensure long-lasting aesthetic coherence, the building's façade is clad in WEO® composite cladding. This innovative material, with its subtly textured wood finish, provides a natural and authentic look, while guaranteeing optimal resistance to weather conditions.

The outdoor spaces extend this harmony with Brooklyn composite decking, which combines design and durability. Its refined finish and sophisticated color create a seamless connection with the Mediterranean landscape, enhancing the villa's timeless character.

An aesthetic and functional choice, designed for architects seeking elegant, long-lasting solutions that meet the demands of contemporary architecture.

Praceta

Private House

Located in the heart of a dynamic residential neighborhood in Portugal, this contemporary villa showcases a distinctly urban architectural style, characterized by the use of raw concrete and expansive glass surfaces. Its structured and minimalist design achieves a delicate balance thanks to the WEO® Brise Soleil cladding, which softens the overall aesthetic by playing with light and adding warmth to the façade.

By gently filtering sunlight, the WEO® Brise Soleil cladding creates a dynamic interplay of light and shadow that enhances the façade throughout the day. It softens the rigidity of the concrete while preserving the privacy of the interior spaces.

Chosen for its refined aesthetics and durability, this composite cladding seamlessly integrates into the Portuguese urban landscape, once again proving its ability to enhance both natural settings and modern city architecture.

Lake Life

Houseboats

At the heart of an environment that is both soothing and demanding, this floating house stands out with its contemporary elegance and harmonious integration with nature. Designed as a true extension of living space onto the aquatic landscape, it reveals clean lines and a resolutely modern architecture.

The choice of WEO® cladding was an obvious one: its ultra-matte finish and authentic wood aesthetic bring warmth and refinement while withstanding the specific challenges of a humid environment. The façade gains depth and rhythm, subtly reflecting the variations of light and the movement of the water.

This achievement highlights the ability of WEO® to adapt to the most distinctive projects, combining technical performance with aesthetic value.

Oryx

Oasis Gas Station

Oryx Energies is one of the largest and oldest independent suppliers of energy products and services in Africa. The aim was to completely overhaul the image of its service stations.

Given the climatic conditions in Africa and, above all, Oryx's desire to opt for durable, low-maintenance materials, the choice was made in favour of our WEO® composite cladding boards.

The initial colour choice was teak, but following the completion of a first pilot station in Tanzania, Fiberdeck® developed a new lighter colour, close to the sandy Cedar colour, to better integrate the shops into the natural surroundings.
